VitaPanel Laboratories

Food Sensitivity Panel (IgG) · Specimen: dried blood spot · CLIA 05D2217788

Patient: Fable Nine DOB: 04/12/1998 Collected: 10/12/2026 Reported: 10/17/2026
Ordering ID: VP-2026-081433

Elevated Reactivity Results

Foods below showed IgG reactivity above the reference threshold. Foods not listed were below threshold.

Food	IgG (U/mL)	Class	Reactivity
Beef	78.4	III	High
Cow Milk	41.2	II	Moderate
Tomato	19.8	I	Low
Almond	17.3	I	Low

Interpretation Guide

Class III (High): IgG above 50 U/mL. Class II (Moderate): 25 to 50 U/mL. Class I (Low): 15 to 25 U/mL. Values below 15 U/mL are considered non-reactive. IgG reactivity indicates exposure and immune recognition; it is not a diagnosis of allergy or intolerance. Discuss results with a qualified practitioner before dietary changes.
